(54) Title: **METHOD FOR VEHICLE COMMUNICATION**

(57) Abstract: A method in communication between a vehicle (1) travelling along a route (7) and a stationary system (2), the vehicle being equipped with a communication unit (3) which communicates messages to the stationary system (2). The method comprises dividing the route into a plurality of partial sections (8), defining for each partial section a required information flow from the vehicle, and adapting the communication to this definition. The method makes it possible to command the communication unit always, to communicate with correctly adjusted accuracy. This also improves the possibility of effectively utilising the traffic information in local units, for instance for displays and traffic signals.
